

JOSE O. CLAUDIO VARGAS
Analytics | Data Science | Applied Statistics

Orange City, FL | Joseo.claudio19@gmail.com | (386) 500-2394 | [LinkedIn](#) | [GitHub](#) | joseoclaudio.com

SUMMARY OF QUALIFICATIONS

Analytics professional with 5+ years of experience applying forecasting, data analysis, automation, and quantitative decision support across retail, operations, and finance. Build analytical workflows using Python, SQL, Excel, and modern data tools to transform large operational datasets into actionable business insights. Hands-on statistical modeling and machine-learning experience through applied projects spanning time-series forecasting, regression, classification, feature engineering, model comparison, and validation. Currently pursuing an M.S. in Applied Statistics at Purdue University.

PROFESSIONAL EXPERIENCE

EssilorLuxottica

Apr 2022 – Present

Supply Chain Analyst

- Develop store- and SKU-level forecasts, allocation analyses, and inventory recommendations across a \$40M+ retail product portfolio using POS history, demand trends, assortment needs, and available inventory.
- Analyze forecast-versus-actual performance, sales trends, inventory, and in-stock results to identify drivers, quantify variances, and support recurring planning decisions.
- Automate recurring analysis, data extraction, reporting, and validation workflows using Python, Advanced Excel, VBA, and Power Query, reducing manual processing across large operational datasets.
- Built a centralized DuckDB-based analytical data store to support year-round querying of historical data and simplified management views, reducing reliance on increasingly large Excel-based datasets.
- Led a \$1M+ inventory-validation initiative that improved data accuracy by 15% and strengthened downstream planning and replenishment decisions.

Rexel USA

Jul 2021 – Apr 2022

Financial Analyst & Corporate Accounting Analyst

- Analyzed regional and national KPIs, profitability trends, and performance variances to identify business drivers and communicate findings to finance and operational leadership.
- Modeled financial outcomes under changing commodity prices and market conditions using scenario analysis to support forecasting and short-term planning decisions.

FGX International

Jan 2021 – Jul 2021

Vendor Managed Inventory Analyst

- Analyzed retail sales and inventory trends to support seasonal forecasting, inventory allocation, and investigation of in-stock issues across customer locations.

SELECTED ANALYTICS & DATA SCIENCE PROJECTS

Retail Allocation Simulator

[GitHub](#)

- Designed a rule-based retail allocation simulator that combines store priority, recent item sales, current inventory, distribution-center availability, capacity, shipment requirements, and target constraints to support allocation decisions under limited supply.
- Built an auditable Python-to-Excel workflow with allocation, validation, and review outputs; the public large-scale example evaluates 325,000 unique store-item rows in a weekly allocation snapshot.

Retail Demand & POS Forecasting

[GitHub](#)

- Built and compared Naive, Seasonal Naive, ETS, Linear Regression, Prophet, and XGBoost models for daily category-level retail demand using the M5 Forecasting dataset.
- Evaluated models using 13 expanding validation windows and an untouched 365-day test period with WAPE, MAE, and RMSE; best observed category-level test WAPE reached **7.05%**.

Credit Risk Probability-of-Default Analysis

[GitHub](#)

- Built an end-to-end credit-risk classification workflow using 466,285 historical loan records, including data preparation, feature engineering, WoE/IV analysis, logistic regression, and held-out model validation.
- Evaluated classification performance using ROC-AUC, Gini, and KS; achieved a **0.699 held-out ROC-AUC** and translated model output into an illustrative 300–850 scorecard for interpretable relative risk analysis.

EDUCATION

Purdue University — M.S. in Applied Statistics

Expected 2027

Relevant Coursework: Design of Experiments, Statistical Learning for Multivariate Data, Linear Regression, Probability, Statistical Inference

Bryant University — B.S.B.A. in Finance; Minor in Chemistry

May 2020

TECHNICAL & ANALYTICAL SKILLS

Programming & Data: Python, SQL, R, DuckDB, pandas, Polars, NumPy, SciPy, scikit-learn, statsmodels, XGBoost

Statistics & Machine Learning: Regression, Classification, Time-Series Forecasting, Feature Engineering, Statistical Modeling, Model Validation, Experimental Design, Exploratory Data Analysis

Analytics: Business Analytics, Forecasting, Data Validation, Data Quality, Scenario Analysis, KPI Analysis, Inventory Analytics, Decision Support

Development & Visualization: Git, GitHub, Bash, Linux/Unix, Jupyter, Power BI, Tableau, Advanced Excel, VBA, Power Query
